

April – June 2021 Photos of the RIVERSIDE LIVING SHORELINE PROJECT

Planting red mangroves (*Rhizophora mangle*), black mangroves (*Avicennia germinans*), on the property adjacent to Riverside Conservancy. *Spartina alterniflora* and *Spartina patens* were also planted. The natural growth of the grasses is expected to fill in the gaps, however we will be planting more at this location to ensure plant density, as there are signs of grazing (green sea turtles have been observed feeding on the alterniflora).

Planting the rows of *Spartina alterniflora*.

Plant staging area.
